

ABSENCE IS NOW AN API

Office Afterlife

Office Afterlife turns human absence into managed continuity.

A private deployment offer for businesses that cannot afford to lose operational memory when people log off, leave, retire, or are suddenly unavailable.

CONTINUITY CONSOLE

4,892

tasks reassigned

19

legacy instances

2.7%

operational drift

Preserve work patterns. Extend active workflows. Keep teams moving through transition.

The real risk is not vacancy; it is lost working memory.

Most continuity plans track roles and files. They miss the tacit layer: why decisions were made, who needs context, what can wait, and what breaks when the human owner disappears.

How Office Afterlife Works

From employee activity to digital continuity—without vacancy.

Office Afterlife preserves how work actually gets done.

The platform converts daily work behavior into a controlled operational twin: trained on approved work systems, governed by autonomy settings, and designed to hand work back to humans cleanly.

01 / Capture

Work Pattern Intake

Email, docs, chats, meetings, tickets, calendars, approvals.

02 / Model

Operational Twin

Tone, priorities, collaborators, recurring tasks, and decision logic.

03 / Continue

Autonomous Relay

Drafts, delegates, summarizes, escalates, and prepares re-entry.

Businesses can start supervised and scale autonomy only when trust is earned.

The sales motion does not require a leap into full automation. Office Afterlife can be positioned as a staged continuity layer with clear review, approval, and escalation boundaries.

Four business moments create immediate buying urgency.

Office Afterlife is easiest to sell when absence is already expensive, visible, and emotionally loaded.

DISMISSAL

Immediate continuity agent

Redirect unresolved threads, answer routine questions, document replacement context.

END OF SHIFT

Overnight work relay

Continue non-critical work and prepare a morning handoff.

RETIREMENT

Institutional memory layer

Preserve decades of tacit knowledge as an accessible agent.

DEATH

Sensitive role continuity

Minimize downtime while controlling access to operational memory.

Morning Sync makes agent work reviewable before humans re-enter.

The strongest buyer story is not replacement. It is a clean re-entry ritual: what happened, what changed, what needs judgment, and where the human should resume.

Governance is the reason this can be sold to serious organizations.

For leadership teams, the product is not just an agent. It is a control system for autonomy, access, accountability, and identity drift.

● BUSINESS CASE

The buying case is continuity, lower disruption, and recoverable knowledge.

Use the public product metrics as directional proof points in early conversations, then validate them with the buyer inside a scoped pilot.

94%

continuity retention across recurring workflows

61%

reduction in post-departure operational disruption

8.4h

additional productive relay time per user

2.7%

median behavioral drift under supervised continuation

SALES NOTE

Position these as pilot targets and product benchmarks, not audited customer outcomes. The first deal should sell evidence creation as much as software access.

A 90-day pilot gives buyers evidence without full commitment.

The cleanest commercial path is a limited deployment around one team, one transition risk, and one measurable continuity objective.

DAYS 1-15

Select pilot group

Choose department, risk moment, access scope, and success measures.

DAYS 16-45

Capture patterns

Train from approved email, docs, calendar, task, and meeting data.

DAYS 46-75

Run supervised

Activate passive and assisted continuation with review layers.

DAYS 76-90

Prove value

Report disruption avoided, handoff speed, drift, and re-entry quality.

● NEXT STEP

Sell the first deployment as a private continuity consultation.

The close should feel controlled: qualify the business risk, select a pilot population, define approval boundaries, and book a private deployment consultation.

Request private deployment consultation

Office Afterlife / Workforce Persistence Suite

QUALIFIED BUYER CHECKLIST

- ☐ Has recurring work that depends on tacit knowledge
- ☐ Faces transition, attrition, retirement, or restructuring risk
- ☐ Can approve 90 days of employee workflow data
- ☐ Needs documented handoff, delegation, and review controls
- ☐ Has an executive owner for continuity outcomes

NEVER LOSE AN EMPLOYEE AGAIN
